BECHEM-RHUS SU 2

Electrical Contact Grease

Functions:

- **Lubricates sliding contacts**
 - Eases operation
 - Prevents scratching and wear of sliding contacts
 - Eliminates contact looseness and sparking
 - Eliminates copper dust generation that causes sparking and flashovers.
- **Protections against corrosion**
 - Prevent formation of oxide films and sulphide layers on the contact surfaces that cause:
 - increase electrical resistance;
 - overheating and sparking.

Benefits

- Lubricates and protects electrical contacts from wear and corrosion.
- Highly conductive micro fine silver pigments plate the contacts to ensure full conductivity over the entire contact surfaces.
- Grease by itself is non conductive – no danger of short-circuiting due to overgreasing.
- Non-melting – does not drip and contaminate other parts should overheating occurs.
- Compatible with copper, aluminium, silver or cadmium plated surfaces.

Recommended Applications

- All electrical sliding contacts of switches, air circuit breakers, jumper feeders, relays, rectifiers, potentiometers
- All static contacts of busbar connection, battery terminals, blade type fuses.
- As silicon free heat sink compound.
