Technical product information

HIGH-LUB LFB 2000

Multipurpose EP grease with emergency run properties

9004751

Rev. 01_27.11.03

Description
To lubricate plain and roller bearings and, to reduce friction and wear on mechanisms subjected to high load. For all industrial sectors. Water that has been absorbed by the grease will neither affect its consistency nor corrosion protection properties. In addition to its excellent ageing resistance and load carrying capacity, HIGH-LUB LFB 2000 has good adhesion and is resistant to hot and cold water. White solid lubricants in the grease prevent the metal-to-metal-contact in the area of mixed and boundary friction. This helps reduce the coefficient of friction even at high surface pressure and results in less wear. Its high lubricating effectiveness helps prolong relubrication intervals. HIGH-LUB LFB 2000 is lead-free.
Examples of application
To lubricate plain and roller bearings, guideways and other machine parts such as used in constructional machinery, machine-tools, paper mills or in the stoneware and textile industry, household and washing machines, electrical and precision instruments, threaded spindles.

properties:

- universal grease for building and industrial sectors
- service temperature - 20°C up to + 120°C
- reliable corrosion protection
- wear protection
- water absorption will not affect consistency
- contains light-coloured solid lubricants

Thickener		Li/Ca soap	
Worked penetration	1/10 mm	265 - 295	DIN ISO 2137
Drop point	°C	> 170	IP 396
Base oil		mineral oil	
Kin. viscosity at 40°C	mm²/s	approx. 180	DIN 51 562
Kin. viscosity at 100°C	mm²/s	approx. 13	DIN 51 562

Characteristic data

- NLGI grade 2
- Poss. denomination acc. DIN 51 502:
KPF 2 K – 20
- Speed index:
($k_s \times n \times d_m$) :
400 000

The above data correspond to latest technology, modifications reserved. This information is intended as a guide and does not necessarily represent a marketing specification. In individual cases tests have to be carried out by the consumer. Further data upon request.

OKS 536

Graphite Bonded Coating, water-based, air-drying

Main advantages and benefits

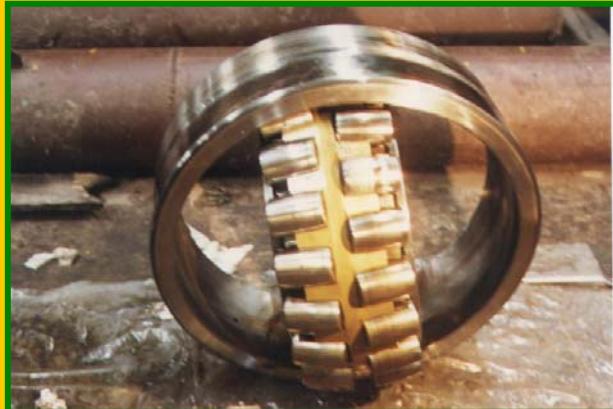

High-temperature and pressure-proof dry lubricant film for temperatures where oil and grease lubrication is not feasible. Can be sprayed onto hot surfaces. Particularly economical as dilutable with water up to a ratio 1:5 maximum.

Additional Information	released by the LGA Nuremberg	
Colour/Main Components	black/ graphite, additives,water	
Temperature Range (°C/°F)	**temp. range of solid lubricants)	-35°C to +600°C** -31°F to+1112°F**
Density	[g/cm ²]	1.10
Flash- point	(°C/°F)	none
Application	Drying/ Curing	Sliding surfaces have to be clean and degreased. Drying time acc. to layer thickness appr.30min at+20°C/+68°F, acceleration with increasing temperature
Economy	[m ² /kg] resp. [m ² /Aerosol]	20 to 40
Frictional Behaviour	Press-Fit-Test	$\mu = 0.01$ no chatter Friction value of thread $\mu = 0$
Packaging	canisters of 5 kg canisters of 25 kg

Technical data sheet

HIGH-LUB FA 50 MO

High performance EP grease

9003971

07/02

Description
To lubricate large roller and plain bearings subjected to high and severely high load
Very beneficial to low speed bearings operating under shock load conditions
To reduce friction and wear at bearings operating under mixed friction conditions
To protect bearings from environmental influences also in the presence of water
Application examples
Roller and plain bearings in the heavy industry, mining and construction
Main roller bearings and rocker arm bearings of vertical roller mills and roller presses
Bearings of slew rings, crushers, shaking screens
Guide pads of large drive shaft joints

Properties:

- Operation temperature -20 °C to +120 °C
- Contains EP additives and solid lubricants to ensure emergency run characteristics
- Excellent wear protection
- Very good corrosion protection
- High worked stability even if mixed up with water

Thickener		Li/Ca	
Worked penetration	1/10 mm	280 ± 15	DIN ISO 2137
Worked penetration difference after 10 ⁵ DS	1/10 mm	appr. 30

HIGH-LUB FA 113

06/00/06

**Journal bearing and
Open gear lubricant**

page 1 of 1

Description

To lubricate large journal bearings and open gears subjected to high and severely high load.
Suitable for bath lubrication or circulation systems.

Service temperature range: up to + 200°C
Consistency according to DIN 51818 NLGI grade 000

To reduce friction and wear on slow moving mechanisms subjected to mixed friction and very high and/or shock loads. HIGH-LUB FA 113 offers excellent corrosion protection also in the presence of water.

Benefits

HIGH-LUB FA 113 is equipped with special EP additives and a selection of solid lubricants which enable the product to withstand high loads at low and medium circumferential speeds. HIGH-LUB FA 113 is specifically designed to be applied by bath lubrication or circulation systems.

Characteristic data

Colour		black

High performance EP gear oil

956002
07/01

Description
High performance EP gear oil with a very high base oil viscosity for large, heavy loaded slow turning industrial gear boxes The special additives inside the oil form, due to a physical and chemical reaction, a very strong protection layer on the flanks and offer thus a reduced coefficient of friction and a sufficient strong lubricating film even under the conditions of very low speed For gear boxes where standard gear oils do not provide sufficient load carrying capacity
Application examples
Large slow turning gears in the sugar and mining industry

Properties:

- Operation temperature 0 °C to +140 °C
- Extreme high load carrying capacity
- Excellent wear protection
- Very good corrosion protection
- Good anti-ageing characteristics

Base oil		Min/Syn	
Kin. Viscosity at 40 °C	mm ² /s	appr. 4800	DIN 51 562
Kin. Viscosity at 100 °C	mm ² /s	appr. 180	DIN 51 562
Viscosity index		130	
Flash point	°C	> 240	DIN ISO 2592

Technical Product Information

BERUGEAR GS 220...1500 BM

High performance EP oils

Description

09/03

Solid free high performance gear and circulation oils for bearings or gearboxes running under high mechanical loads
Forms reactive layers which provide physical as well as chemical actions thanks to which a microscopic reformation of surface structures and an increase of the contact pattern is supported
Very beneficial to mechanisms made of steel or non-ferrous metals with a high portion of sliding friction such as worm gears
Will not attack mineral oil resistant seal materials or machine paints
Must not be used in presence of babbitt metal

Properties:

- Operation temperature betw. -20°C to +120°C and 0°C to +130°C
- Can also be used as running-in oil even under load
- Very good load carrying capacity and wear protection
- Reduces the coefficient of friction, the oil sump temperature and thus the power loss
- Very good corrosion protection
- Very little foam formation

Application examples

Spur, conical and worm gears in rolling mills, rubber kneaders, crushers, calanders, winches, cranes and conveyors
Gear boxes with damaged or extremely high loaded tooth flanks

Open Gear lubricant

9006561
07/02**Description**

Service lubricant for large open gear drives operating under heavy loads and high circumferential speeds to be applied by immersion or circulation systems
Ensures high operational reliability of gear drives even under adverse dynamic or thermal conditions

Properties:

- Operation temperature +0 °C to +200 °C
- thermal stability -30 °C to 250 °C
- very good adherence
- high lubricant film pressure resistance
- excellent wear and corrosion protection
- no hardening or brittling of lubricant film
- contains no bituminous ingredients, solvents or toxic heavy metals

Application examples

Open gear drives of mixing drums, dryers, ball mills, rotary kilns
Heavily loaded tooth couplings
